Key Risks

Risk of Investing in Natural Resources Companies: Investments in natural resources and natural resources companies, which include companies engaged in agriculture, alternatives (e.g., water and alternative energy), base and industrial metals, energy, forest products and precious metals, are very dependent on the demand for, and supply and price of, natural resources and can be significantly affected by events relating to these industries, including international political and economic developments, embargoes, tariffs, inflation, weather and natural disasters, livestock diseases, limits on exploration, often changes in the supply and demand for natural resources and other factors.

Liquidity Risks: Liquidity risks exist when a particular financial instrument is difficult to purchase or sell. If the relevant market is illiquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous or reasonable price, or at all. This is a factor to consider when investing in a Nuclear ETF.

Industry or Sector Concentration Risk: The Fund's assets may be concentrated in one or more particular sectors or industries. A Nuclear ETF may be subject to the risk that economic, political or other conditions that have a negative effect on the relevant sectors or industries will negatively impact the Fund's performance to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries

For more information on risks, please see the "Risk Factors" section of the relevant Fund's prospectus, available on www.vaneck.com.
